SUMMARY

Final-year B.Tech Computer Science Engineering student (AI & ML specialization) graduating in 2027, with strong foundations in data structures, algorithms, and backend engineering. Solved 600+ algorithmic problems with a 1750 LeetCode rating and ranked in the Top 32% at IICPC CodeFest 2026. Built REST APIs and backend systems using Python, Flask, FastAPI, and PostgreSQL, including concurrency-aware transaction processing and a RAG pipeline. Use AI-assisted development tools such as Claude, ChatGPT, and Cursor while validating generated code for correctness and edge cases.

SKILLS

Languages	C++, Python, JavaScript, SQL
CS Fundamentals	Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, High-Level System Design
Backend & APIs	Flask, FastAPI, REST APIs, bcrypt, Pydantic
AI & LLM	RAG, LangChain, FAISS, Vector Embeddings, LLM APIs, Prompt Design
Databases	PostgreSQL, MongoDB, MySQL, SQLite, SQLAlchemy ORM
Testing & Engineering	Debugging, Git/GitHub, Agile/SDLC, Postman
AI-Assisted Development	Claude, ChatGPT, Cursor, Antigravity, DeepSeek; AI-assisted coding, debugging, code review, and output validation

EXPERIENCE

Technical Assistant Intern (DSA)

Jun 2025 – Nov 2025

Coding Blocks Pvt. Ltd., Noida

- Conducted structured code walkthroughs across 100+ data structures and algorithms problems, focusing on algorithmic efficiency, correctness, clean implementation, and first-principles problem solving.
- Identified recurring conceptual gaps and edge-case failure patterns, created systematic reference material, and reviewed peer solutions for correctness, readability, and maintainability.

PROJECTS

Bharat Pay – Full Stack Banking Application

[GitHub](#) | [Live](#)

Flask + SQLAlchemy + PostgreSQL + JavaScript + Tailwind CSS

- Built a multi-role banking application with modular REST APIs, secure bcrypt password hashing, and an ACID-compliant PostgreSQL schema for reliable account and transaction management.
- Implemented atomic transaction processing and database constraints to maintain consistency during concurrent account operations and high-frequency read/write scenarios.
- Deployed the application using Gunicorn on Render and independently debugged concurrency issues and race conditions affecting transaction reliability.

Document Q&A – RAG System

[GitHub](#)

Python + FastAPI + LangChain + FAISS + LLM APIs + Streamlit

- Built a retrieval-augmented Q&A service over PDFs: text extraction, chunking, sentence-transformer embeddings, and a FAISS vector index, with answers generated by an LLM from the retrieved context.
- Exposed FastAPI endpoints to upload a PDF (each gets its own FAISS index and document ID) and query a specific document, plus a Streamlit front end.
- Constrained the prompt to answer only from retrieved context and added an evaluation endpoint that scores answers against reference answers using cosine similarity.

ACHIEVEMENTS & EXTRACURRICULAR

- Solved 600+ algorithmic problems with a 1750 LeetCode rating; ranked in the Top 32% at IICPC CodeFest 2026.
- Participated in multiple hackathons, collaborating in small teams to build and deliver full-stack prototypes under tight timelines.
- Represented school in inter-school swimming competitions across Greater Noida, developing discipline and competitive consistency through structured training.

EDUCATION

Noida Institute of Engineering and Technology, Greater Noida

2023 – 2027

B.Tech in Computer Science Engineering (AI & ML)

CGPA: 8.72/10

CBSE Class XII

80.55%
